

SCIENCE CLUB

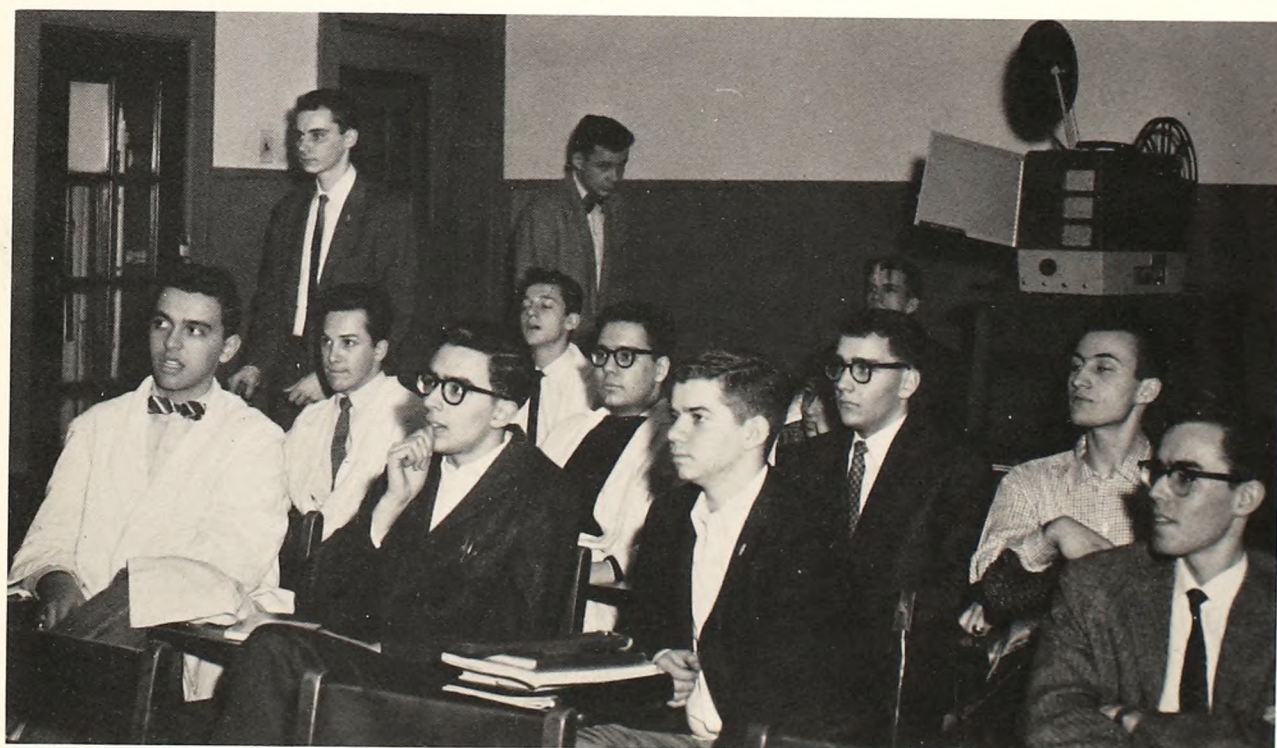

As Don Mulligan and Rocco Valluzzi record the results of an experiment in polymerization, John Ferguson measures twenty-five centimeters of hydrochloric acid.

THOMAS HALTON
President

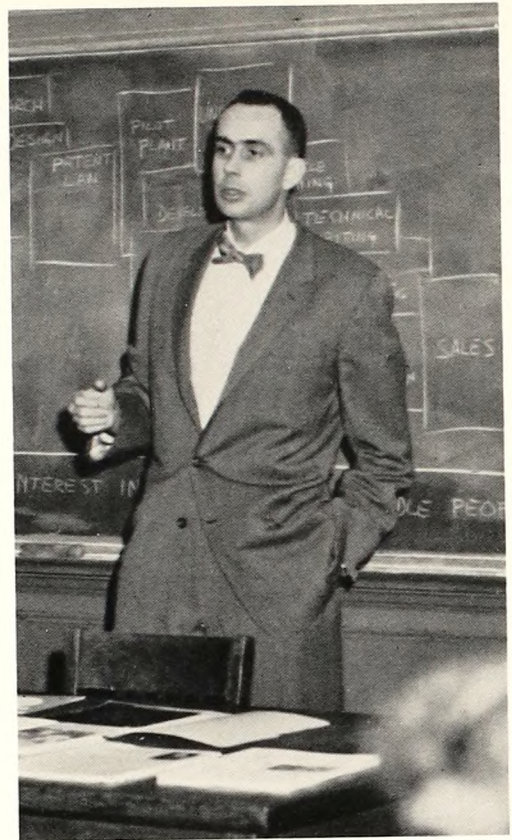

The Science Club endeavors to provide students with the equipment and facilities for conducting individual scientific experimentation in conjunction with related courses. Projects and research work prepare the budding scientist for postgraduate work, and the club attempts to secure fellowships, scholarships and job opportunities for its members. Meetings and talks on topics of scientific interest complete the program.

Films were part of the Science Club's effort to explore and explain the wonders of botany to students.

Richard Hoenig is congratulated by Tom Halton as he is presented with a science award.

Mr. Richard Allen of Pfizer Company was one of the Club's guest speakers this year.

The Pfizer Company left many booklets concerning career opportunities for science students through Mr. Allen. There was much discussion concerning the standard of academic prowess necessary for employment at Pfizer Company.
