

SCIENCE CLUB

It is probably an understatement to say that the 1968-1969 school year was important to the Science Division of St. Francis College. It was a year of growth and innovation and was marked not only by the expansion of the Science Department but also by the renovation of the Science Society.

Under the direction of president Frank DiMartino and vice-president Anthony Faga, this organization became one of the most dynamic co-curricular activities in the college. There was hardly a time when the Science Society was not doing something. In the beginning of the year, it helped the incoming Freshmen Science majors by providing a tour of the new Science Center and advising them of both what to expect from the Science Division and what would be expected of them. The Society also provided a tutoring service in chemistry for those who need help.

Through its "Film and Lecture Series," ten scientific films were shown and four guest lecturers addressed the membership. The organization also sponsored tours of the Methodist Hospital and the Coney Island Aquarium. The Science Society also donated a diarticulated human skeleton to the Science Division as a gift from the members of the Society.

The Science Society could not let its meager budget stop the programs it had planned, so it sponsored the "Science Society Fall Dance." The dance was a huge financial success.
